

Euans. 1625.

An Almanacke  
for the yeare of Grace.

1625.

Being the first from Bissextile  
or Leape yeaſe.

Calculſted according to the  
Latitude of the famous and anci-  
ent Towne of Shrewburie,  
And may conveniently ſerue for  
any place within the Monarchie  
of great BRITTAINE.

By John Euans.

The workes of the Lord are great, to be  
ſought out of all them that haue  
pleaſure therin: his worke is wor-  
thy to be praized and had in honour.

LONDON.

Printed for the Company of  
Stacioners. 1625.

A briefe Chronologie of certaine  
memorable things past, according to the  
obseruation of the best  
Writers.

Since the Creation of the world	5587
Since Noahs floud	3931

 $\lambda$  Leo,  $\pi$  Virgo,  $\omega$  Libra,  $m$  Scorpio,  
 $\gamma$  Sagitarius,  $\nu$  Capricor.  $\sim$  Aquarius,  $X$  Pisces,  
 $\hbar$  Saturne,  $\gamma$  Jupiter,  $\delta$  Mars,  $\odot$  Sol,  $\varrho$  Venus,  
 $\varphi$  Mercurie,  $\lambda$  Luna.

January hath xxxij. dayes.

As yeares reuolve, by moneths, and dayes, and howres,  
Decayes, consumes, expires the life of Man :  
Yet carelesse we securely liue in sinne :  
Fewe thinking that, through sinne our woe began.

# A Prognostication.

## Astronomical observations in the ministration of Phisick laxative or purgations.

These things are chiefly to be respected in the use of purgations, that is, the Time, Age, and Manner of the ministration thereof. As touching the first in electing a fit time for the taking of physick, you are to take heed that it bee not taken in the time of extreme cold or heat. Hipp. p. 4. therefore the Spring and Autumn are more convenient for physick then Summer or winter: notwithstanding, if necessarie require physick in Summer, it ought to be by vomit, in winter by purgations. Hipp. p. 4.

Touching the age, it ought not to be before 14, nor after 63 yeares of age: whosoeuer will take much physick in youth, will deplore the ruth of age.

Thirdly for the manner, we ought not to forget the opinion of Albumasar: to give purgations in a time elected, according to the motion of the moone in watrie signes, which are ♎ M. and ♏ X.

The ♎ in ♀ purge choller  
♀ in \* or { ○ purge phlegm } with electuaries.  
Δ with ♐ purge melan.

The ♎ in ♀ choller, ♀ not combust.

ℳ in \* or { ○ purge flegme } with potions.  
Δ with ♐ purge melancholie

The

The ☽ in { purge choller  
 ☽ in \* or { purge slegme } with pills,  
 △ with { purge melanchol. }

The ☽ in { purge choller  
 ☽ or ☽ in { purge slegme } with any sic  
 \* or △ in { purge melancholie } medicines.

purge not { the spleene ♂ the gall ♂  
 the liver ♀ the secrets ♀ } being  
 the heart ☽ the lungs ♀ the braine ♂ } strong.

Give no physick when ♀ is ascendant, nor when  
 the moone is in V & L, for they will cause vomit: and  
 take heed euer of the horres of Saturne and Mars, for  
 they are enemies to nature.

### Of Phlebotomy or Bloodletting.

The time of Phlebotomy is two-fold, the one when  
 necessitie enforceth, as in the Pestilence, Plurisse,  
 Phrense, &c. The other is elected according to the  
 rules of Astronomie, and is taken from the place and  
 motion of Luna, and her configuration with the other  
 Planets, as followeth.

Let blood the { V the head  
 Phlegmatick { excepted,  
 ☽ in { ♀ the thighes }

## A Prognostication.

Let blood the  $\textcircled{1}$  the buttockes  
Melancholy  $\textcircled{2}$  excepted.  
the  $\textcircled{3}$  in  $\textcircled{4}$  the legges

Let blood the  $\textcircled{1}$  the brest  
Chollericke  $\textcircled{2}$  in the secrets  $\textcircled{3}$  excepted  
the  $\textcircled{4}$  in  $\textcircled{5}$  the feet

Looke that you let not blood the  $\textcircled{1}$  being in  $\textcircled{2}$ ,  $\textcircled{3}$ ,  
or in the signe ruling the member cut, neither ventosles  
to be applied,  $\textcircled{1}$  being in  $\textcircled{4}$ . Almansor lib. 15. cap. 24.

### The Aspects of the Planets hindering extraction of blood.

$\textcircled{1}$  hindereth  $\textcircled{2}$  hindereth  $\textcircled{3}$  a day before and after.  
 $\textcircled{1}$  with  $\textcircled{2}$  hindereth  $\textcircled{3}$  hindereth  $\textcircled{4}$  12 houres before and after.

$\textcircled{1}$  with  $\textcircled{2}$  hindereth 12 houres before and  
after:  $\textcircled{1}$  with  $\textcircled{3}$  hindereth 6 houres before and  
after:  $\textcircled{1}$   $\textcircled{2}$   $\textcircled{3}$  of  $\textcircled{4}$  with  $\textcircled{5}$   $\textcircled{6}$   $\textcircled{7}$   $\textcircled{8}$  or  $\textcircled{9}$  if  $\textcircled{4}$  be in a  
good signe, giueth a good time for Phlebotomy.

Likewise it behoueth the Physician to consider the  
age of the person, for from the  $\textcircled{1}$  to the first  $\textcircled{2}$ , let  
blood youth: from the first  $\textcircled{2}$  to the  $\textcircled{3}$ , middle age:  
from  $\textcircled{3}$  to the second  $\textcircled{4}$ , elder yeares: & from thence  
to the  $\textcircled{5}$  againe, old age. Also let blood the Sanguine  
from  $\textcircled{1}$  to the first quarter: chollericke, from the first  
quarter

quarter to the full: *Flegmaticke*, from the full to the last quarter: *Melancholick*, from the last quarter to the change.

Take	Purge by Haeling, Womits, Glisters, Gargarismes, Preparatives, Stop Rhumes,	The in	¶ or ♍.
			○ or ♍.
			∨ ⊖ or ≈.
			¶ or ∨.
			II ⊖ or ≈.

¶ or ♍.  
○ or ♍.  
∨ ⊖ or ≈.  
¶ or ∨.  
II ⊖ or ≈.  
○ ♍ or ∙.

## Astronomicall Elections for Husbandry, in planting, grafting, and sowing of seeds.

If the wind be in the North or East, doe neither plant nor graft: the wind being South or West, plant and graft, the Moone encreasing in ♍ or ≈.

Remoue or set young trees in the last quarter, the Moone in ♍ or ∙, in September, October, Nouember, and February.

Sow all kind of corne the Moone encreasing in ¶.

Set or sow all kind of seeds, the Moone well seated in ∨, ♍, ♍, ♍, ≈, ∙, ≈, or ∙: all round seeds three dayes before or after ♍.

Gather fruits at the full: Mucke land to kill weeds in the decrease of the Moone.

Geld Cattell, the Moone in ∨, ≈, or ∙, increasing.

## A Pregnoſtication.

Fall timber for building, from Midsommer to  
Christmas, the moone decreasing, cut coppice or ſewell  
in the firſt quarter of the moone, cut vines in Februa-  
ry or March, remoue trees betwixt Hollantide and  
Twelv tide, in the laſt quarter of the moone.

---

### Elections for weaning of Children.

When the moone is in  $\text{II} \text{ M} \text{ I}$ , or 1 part of  $\text{X}$   
and applying to  $\text{Z}$  or  $\text{Q}$ , it is good to procure  
fairneſſe and ſtrength to the child: to cauſe them na-  
turally to bee addiſed to husbandry, and buſie in the  
commodities of the earth, let the moone be in  $\text{S} \text{ M}$  or  
 $\text{B}$ : the moone decreasing and void of course, maketh  
them ſooner forget the Nurſe.

A

A plaine and perfect Table, containing the dayes,  
houres and minautes of change,full, and quar-  
ters of the Moone throughout the  
whole yeare.

# A Prognostication.

## The beginning and ending of the four quarters of the Yeare.

Winter, ♂ ☲ X.

**A**T what time the Sunne by his vncessant motion, had gotten himselfe into his most southerne declination, begame then our winter quarter Astronomicall, which hapned at his entrance into the first scr: of ♂, making then with vs the shoritest day, and longest night, which hapned the last yeaer 1624, the 11 of December, 30, m. past 7 in the morning, and continueth till he hath finished his restless course through the last three signes of the Zodiacke, ♂ ☲ X.

The diseases of this quarter, are, pushes in the face, leprosie, tooth=ach, red spots, feuers, the scab, flures of blood, paines of the eyes, palsies, gouts, &c.

Spring. V ♈ II.

When the continuall moving Sunne had runne with a wearlesse course through the 12 signes of the Zodiacke, returning afresh into the first scr: of Aries, begins our new solar yeaer, together with our first quarter Astronomicall, making with vs equall dayes and nighes of 12 houres long, and then begins our Spring, which this yeaer hapneth the 11 of March, and continueth till he hath made revolution through V ♈ II.

The ordinary diseases of this quarter, bee leprosies, red spots, tooth=ach, feuers of blood, wheales in the face, small pox, ring=wormes, falling sicknesse, paines in the throat and necke, the Kings euill, grieves in the shoulders and armes, caused by corruption of blood.

Sums

## Summer ☽ ☽ ☽.

Now the Sunne hauing gotten to our highest point of his ascension, being nearest our Zenith, maketh with vs the longest day and shortest night, which this yeare happeneth the 12 day of June. This quarter is of nature hot and dry, like the fiery triplicity: it taketh his beginning when ☽ entreth into the first scr. of ☽: at which time there riseth certayne starres called Aselli, whose vertue causeth some raine, with remissenesse of heat: but comming to Leo, neere Syrius and Procyon, starres of a warm nature, heat groweth most vehement to temperate which the Etelian blow: Lastly, comming to Virgo, the constellation of Araturus rising, a mitigation of heat is produced with some raine.

This Quarter, as it is hot and dry in nature, so doth it alter the humours in mans body, bringing all fruits to ripenesse, cattell to their fatnesse, and men to their wealth. The sicknesse be grieves about the stomacke and spleene, leprosye, and diseases of the face, beard and soze eyes, plurisles, cough, feuers, apostumes, pestilence, taundies, &c.

## Autumne. ♐ m. ♐

Autumne the fourth and last quarter Astronomi-  
call, but the third according to our English account: of  
nature is cold and dry, melancholick, like old age, resem-  
bling the earth, beginning at the summes first ingressie into ♐, pro-  
ducing thereby a second Equinoctiall, coequa-  
ting our dayes with our nights, which hapneth the 13  
day of September, continueth during the summes revo-  
lution through ♐ m. and ♐.

The

## A Prognostication.

### The qualitie, motion, magnitude, and distance of the seven Planets, with the thicknesse of their Spheares.

Saturne is cold and dry, of colour pale and wan, like to Lead, requiring 30 years to make his revolution through the 12 signes: the magnitude of his body exceedeth the whole earth 22 times: according to the accurate obseruations of Tycho Brache, whose distance from the earth is 10550 Semidiameters, that is to say, 237978 miles.

Jupiter is hot and moist, temperate, of colour like gold and splendid, ending his revolution in twelve yeares: the magnitude of his body 14 times exceedeth the earth, and is distant off 159357 miles, and his heauen containes in thicknesse 1899654 miles, and is lower then 78721 miles.

Mars within the concavity of the Spheare of Z. appears of a fiery colour, running his course in two yeares, is of quality hot and dry, chollerick, his magnitude is lesser then the earth 13 times, and is distant from the earth 80536 miles: and his spheare is in thicknesse 26308800 miles, and is vnder 78721 miles.

The Sunne is placed in the midst of the Planets, most cleare and bright, the well-spring of pure light, finishing his revolution every yeaer, rejoicing as a Gyant to runne his course: whose quality is hot and dry temperate, the bignesse of his body is greater then the earth 140 times, and is from the earth distant 64811 miles: his heauen containing in thicknesse 343996 miles, and is below Mars 15725 miles.

Venus vnder the spheare of the Sunne, doth appear

pearre very cleare and shining, of quality cold and moist, of the colour of gold, glisshing and bright: shee is lesse then the Earth six times, and is distant 41374 miles, lying below the Sunne 23437 miles, her sphaere containeth in thicknesse 3274494 miles, endeth her course in a yeare.

Mercury wandring vnder the Sphaere of Venus, appeareth somewhat shining, but not very bright, being never more then 29 degrees distant from the Sun, and therefore seldom seene, his magnitude is 19 times lesser then the Earth, his distance from the Earth is 28562 miles, and is below Venus 1282 miles, his Sphere containing in thicknesse 253372 miles: he endeth his revolution in a yeare.

The Moone is cold and moist, the lowest of all the Planets, whose body is encompassed within the sphaer of Mercury, running ouer the whole Zodiacke in 27 dayes, 7 houres, 43 minutes: shee is lesser then the Earth 42 times, as Tycho-brach affirmeth, and is distant from the Earth 15750 miles, whose heauen containeth 105222 miles, and is below Mercury 12812.

Concerning these distancess of the Planets, vnderstand that it is meant when they be in their meane motion, neither in their Apogeon nor Perigeon, for then they are much further off, or neerer vnto vs. Know also that I have herein followed onely the obseruations of the tres=noble Tycho-brach: which all our moderne Astronomers doe right worthily best approue and allow of, as the most exact in his obseruations.

# A Prognostication.

## Of the nature and quality of the twelve Signes.

**V** Aries is a signe fiery, hot and dry, by his heat an quickning d<sup>r</sup>ynesse, preseruing life, fit for the nourishment of all things animall and vegetable, it is a signe masculin: diur: moueable, Equinoctiall, oblique, &c.

**o** Taurus is a signe cold and dry temperate, profitable to the earth, and to all things springing therefrom: it is a signe earthy, feminine, nocturnall, and oblique, &c.

**II** Gemini is hot and moist temperate, ayyy, comforting nature, and by his naturall heat producing the seeds to fruits: it is masculine, diurnall, occidentall, dexter, common, and oblique, &c.

**o** Cancer is cold and moist, temperate, apt for the nourishment of all naturall things: it is a signe feminine, nocturnall, septentrionall, moueable, estiuall, solstitiall, and of right ascension.

**o** Leo is a fiery signe, hot and dry, farre remoued from temperature, tending to the decay of all natures worke, and abatement of fruits: It is masculine, diurnal, sext, right, fiery, &c.

**o** Virgo is cold and dry, hardly temperate, through whose influence all vegetable things receive some detriment and diminution, herbs doe wither, and the leaues fall off the trees: it is a signe earthy, feminine, nocturne, bico:poseall, common, right.

**o** Libra impresseth into the ayre heat and moisture, somewhat declining from temper: It is a signe of the ayre triplicity, masculine, diurnall, moueable, equinoctiall, autumnall, right, and sanguine.

**o** Scorpio, it imparteth to the ayre coldnesse and moisture, exempt from all temperature, watry, feminine, noctur-

nocturnall, sinister, fixt, and phlegmaticke.

¶ Sagittarius is hot and dry, untemperate, causing destruction to seeds and herbs, and hurt to many living creatures: it is a signe of the fiery triplicity, masculine, diurnall, orientall, dexter, right, common, double-bodied, and chollerickke.

¶ Capricorne is cold and dry, untemperate, a signe of the earthy triplicity, feminine, nocturnall, meridional, solsticiall, moueable, &c.

¶ Aquarius is hot and moist, untemperate, noisome and hurtfull to all things: a signe of the airy triplicity, masculine, diurnall, occidentall, sinister, fixed, and sanguine.

¶ Pisces is cold and moist, declining from temperature, and tending to destruction: a signe of the watry triplicity, feminine, nocturnall, dexter, double-bodied, common and phlegmaticke.

The length, bredth, and compasse of England  
and Ireland, with the adiacent  
Islands.

England      { Length,      386  
                    { bredth,      279 } miles.  
                    { compasse, 1532 }

Ireland      { length,      303  
                    { bredth,      113 } miles.  
                    { compasse, 948 }

The Isle      { length,      28  
of Mann      { bredth,      18 } miles.

# A Prognostication.

## The explanation of the former Table.

In the precedent Table vnder the title pound, find the value or price of one pound waight, and against it vnder the title hundred you haue the value of 112 l. which is one hundred waight, at the proportional rate as for example: look 4 d. 3 q. a pound, and you shall find against it 2 l. 4 s. 4 d. which is the value of one hundred waight, &c.

## Briefe Notes of Measures.

Three barley cornes make an inch, 12 inches a foot, 3 foot a yard, 5 yards and a half a perch, 40 perches in length and 4 in bredth an acre, 4 in bredth and 10 in length a rood or quarter of an acre; so that an acre hath 43560 square feet, 4840 square yards, and 160 square perches. Also an English mile is 8 furlong, 88 scores, 320 perches, 1056 paces, 1408 elles, 1760 yards, 5280 feet, 63360 inches, 190080 barley cornes: and 3801600 barley cornes answere 20 miles in longitude. The compas of the earth is 360 degrees, or 21600 Italian miles. The compasse concave of Primum Mobile is 1017562500 miles, and so much doth the Sun goe in 24 houres, according to the motion of the first Mover: and in his meane motion in the Hodiacke he goeth every day 2826562 miles, so that in his periodicall revolution (in respect of his diurnall motion every 24 houres) he goeth 30539250000 miles in the whole yeaire. Let none rashly condemne this as a matter incredible, for instrumentall demonstration will speedily confirm it: & the ground and reason is manifestly plain and certaine to every one that understandeth any thing at all in Geometry.

A compendious Table, of singular use for all sorts of men,  
both for profit, delight, and expedition.

3	4	5	6
1—3	1—4	1—5	1—6
2—6	2—8	2—10	2—12

## The practice of the former Tables.

He bought 4 yards of harsie or other cloth, at 4 s. the yard, in the columnne vnder 4 vpon the left hand find 4, and at the lines end you shall find 16 s. the price of 4 yards, which you desired.

Item, 4 stone of wooll at 18 s. the stone, looke 18, and on the right hand you shall find 72 s.

Item 4 Tunne of Iron at 15 l. the Tunne, against 15 you shall haue 60 l. which is the whole value.

Item, bought 4 open at 4 l. 6 s. 3 d. the one, looke in the columnne next the left hand for 4, and at the lines end you find 16 l. against 6 s. 24 s. and against 3 d. you shall haue 12 d. which is your desire.

Item, bought 4 broad cloathes at 12 l. 13 s. 4 d. the piece, to know the toall, find 12 l. and at the lines end you shall find 48 l. and against 13 s. you see 52 s. and 4 d. you see 16 d.

I haue 56 l. 16 s. and 3 d. to be diuided amonge 2 Merchants, now to diuide this aright, my work must be contrary to the former practice: for in the columnne next the right hand must I looke for these summes, and at the lines end next the left hand the solution is found, as against 56 l. I find 14 l. against 16 s. I find 4 s. and as against 3 d. I find 2 d. so every mans part is 14 l. 4 s. 2 d. truly diuided.

I haue a pasture containing 4 acres in breadth, and in length 22 acres, looke for 22 in the columnne next the left hand, and at the lines end you see 88 acres, which is the acres contained in the said pasture.

I haue shewed you briefly the practice of one columnne, marked with this figure 4: you may by your owne understanding make the like vse of the rest of

the

## A Prognostication.

the columnnes, signid with 5, 6, 7, 8, 9, 10, and employ these figures to what purpose your occasion tendeth: they will never faile you, so you remember to change your denomination artificially, according as the nature of the question requireth.

I haue here remembred this Table, and made this briefe demonstration of the use, thereby to give you notice to enquire and call for a Booke (called The Palace of prostrate pleasure) containing and teaching with ease and expedition whatsoever is necessary to be learned of an English Scholler. In which Booke the said Tables are at large: with such directions and helpe, (so methodically contriuid) that any one that can but onely know his letters, and give the sound of distinct letters, may by his owne practice obtaine sufficient knowledge to read perfectly the holy Bible, or any other English booke. Also it teacheth true Orthography, whosoever will take a little paines to know the use of the sayd Booke, will highly esteeme the same, though of the unexperienced it may perchance incurre an unworthie censure: I haue by the said Book alone, brought many to read any English booke (that is penid of common and familiar English) distinctly and plainly vpon the first sight in one moneth space: and haue taught divers children vnder sixt years of age the said Booke: who without any other helpe I haue (and doe commonly) put next in their Accidence: and they proceed therin with chearsfullnesse and extraordinary expedition.

These bookes are sold by Master John Bill, dwelling in Pauls Churchyard.

At my house neere the 4 Ashes in the Parish of Enfeild, within the County of Stafford, are taught these Arts:

To reade and understand the English, Latine, Greeke, Hebrew to reade.

To write The running Secret. Set Secretary Roman Italian Court hands.

Arithmetick, with the other Mathematicall Sciences.
